Part A: Correct Use of AI in College

I believe AI can be helpful for students in college if it is used responsibly. When students do not understand something from class, AI can help explain the information in simpler words. It can also help students study by creating practice questions or reviewing important concepts. Another good way to use AI is to brainstorm ideas before starting an assignment. I think AI can also be useful for reviewing your own work and giving feedback on areas that need improvement. However, students should still check the information because AI can sometimes provide incorrect answers. Students should also follow their professor's guidelines and acknowledge when they use AI. Overall, I believe AI should be used as a tool to improve learning rather than replace students' own thinking and effort.

Question asked:

"Do you agree with this paragraph about correct AI use in college? Why or why not?"

AI Response:

Yes, I agree with your paragraph about the correct use of AI in college. You make a good point that AI should be used to support students' learning rather than complete their assignments for them. Using AI to explain difficult concepts, create practice questions, and provide feedback can help students better understand the material. One important thing to consider is that students should not rely too much on AI because it could limit their ability to think independently and solve problems on their own. I also agree that students should verify AI-generated information and follow their professors' guidelines. Overall, AI can be a valuable learning tool when students use it responsibly while still putting in their own effort.

Part B: Incorrect Use of AI in College

I believe AI becomes a problem when students rely on it to complete their assignments instead of doing the work themselves. For example, having AI write an entire essay and submitting it as your own work would be considered academic dishonesty. Even if the assignment receives a good grade, the student might not actually understand the material. Another issue is when students copy information from AI without checking whether it is accurate. This can lead to incorrect information being included in their assignments. I also think relying too much on AI can prevent students from developing their own critical thinking and problem-solving skills. Students who use AI without following their professor's guidelines or acknowledging its use could also face academic consequences. Overall, AI can be useful, but using it incorrectly takes away from the purpose of learning in college.

Question asked:

"Do you agree with this paragraph about incorrect AI use in college? Why or why not?"

AI Response:

Yes, I agree with your paragraph about the incorrect use of AI in college. You make a good point that having AI complete assignments for students can prevent them from actually understanding the material, even if they receive a good grade. I also agree that relying too much on AI can affect students' ability to think critically and solve problems independently. One important thing to consider is that AI can sometimes generate information that sounds correct but is actually inaccurate, which is why students should always verify their sources. Students should also understand that different professors may have different policies regarding AI usage. Overall, I believe AI should be used to support students' education rather than replace their own work, learning, and responsibilities.
